Steps to create repository in git:

1. Log in to GitHub:

- Open your web browser and go to https://github.com/.
- Log in to your GitHub account if you haven't already.

2. Navigate to your profile:

- Once logged in, you'll be directed to your dashboard.
- Click on your profile icon at the top right corner of the page to open a dropdown menu.

3. Select "Your repositories":

• From the dropdown menu, click on "Your repositories".

4. Create a new repository:

• On the "Your repositories" page, click on the green "New" button located on the right side.

5. Fill out the repository details:

- Enter a name for your repository in the "Repository name" field. This could be your enrolment number or any other name you prefer.
- You can optionally provide a description for your repository in the "Description" field.
- Choose whether you want the repository to be public or private. Public repositories are visible

to everyone, while private repositories are only accessible to you and collaborators you specify.

• You can also choose to initialize the repository with a README file, which is helpful for providing an overview of your project.

6. Create the repository:

• Once you've filled out the necessary details, click on the green "Create repository" button.

Your repository is now created on GitHub.

Steps to create folder in repository:

1. Navigate to your repository:

• Log in to your GitHub account and go to the repository where you want to create the folder.

2. Click on "Add file":

• In the repository, click on the "Add file dropdown button, then select "Create new file".

3. Specify the folder path:

• In the text field where you would enter the file name, type the desired folder path followed by a

forward slash C / For example, if you want to create a folder named "folder_name", you would type *folder _ name/ .

4. Provide a file name:

• After typing the folder path, you need to provide a file name. This can be anything, as it will be

used as the name of a file within the folder. For example, you can name it placeholder. txt .

5. Commit the file:

- Once you've specified the folder path and file name, scroll down to the bottom of the page.
- You'll see an area to commit your changes. Provide a commit message in the "Commit new file" section.
- Optionally, you can provide a longer description of the changes you've made.
- Finally, click on the "Commit new file" button to create the folder.
